h-INDEX AND CITATION REPORT

The h-index is a measure of the number of highly impactful journal articles published by a given individual. The h-index is calculated using the number of publications and the number of citations for each paper.

There are a number of licensed databases that you can use that offer h-index calculations and citation reports (e.g. Web of Science; Scopus).

Instructions for determining your h-index:

**Web of Science**

The Web of Science tracks, analyzes and visualizes author impact in the sciences, social sciences, and humanities. It is most useful for the sciences. To view your research impact:

1. Access the Web of Science database through your UofT library or your institutional library
2. Search for your name in “Author” (full name or name you use when publishing)
3. Save your publications to a Marked List
4. Review the list generated to ensure it comprises all of your publications-all authorship levels (i.e., as a first author and as one of the co-authors)
5. Create a Citation Report from your Marked List to visualize your h-index and citation count

**Scopus** (firefox or google chrome work better than internet explorer)

Scopus provides citation tracking, visualizations, and analysis tools for authors. Scopus is most useful in the sciences. Scopus also provides a calculation for h-index

1. Access Scopus database through your UofT library or your institutional library
2. Search for your name in “Authors” (full name or name you use when publishing)
3. Select your publications
4. Review the list generated to ensure it comprises all of your publications-all authorship levels (i.e., as a first author and as one of the co-authors)
5. Click “view citation overview” from the menu

Learn more about Scopus Author Metrics

**Please note:** All citation measurement tools have their limitations and they may not reflect academic output in the same way when applying across various disciplines and/or field of research. Therefore, during the academic promotion process, these measures will be viewed within a context, i.e., applications will be discussed and considered while comparing to others in similar field.
